• Link ## 84

$$\lim_{x \rightarrow 1} \frac{x^3 + 3x^2 + 5}{4 - 7x} = \frac{1 + 3 + 5}{4 - 7} = \frac{9}{-3} = \boxed{-3}$$

## 85

$$\lim_{x \rightarrow -2} \sqrt{x^2 - 6x + 3} = \sqrt{4 - (-12) + 3} = \boxed{\sqrt{19}}$$

## 86

$$\lim_{x \rightarrow -1} (9x + 1)^2 = (-9 + 1)^2 = \boxed{64}$$

## 94

$$\begin{aligned} \lim_{x \rightarrow 4} \frac{x^2 - 16}{x - 4} &= \frac{0}{4 - 4} = \frac{0}{0} \\ &\Rightarrow \lim_{x \rightarrow 2} \frac{x \cancel{- 2}}{x(\cancel{x - 2})} = \lim_{x \rightarrow 2} \frac{1}{x} = \frac{1}{2} \end{aligned}$$

98

$$\begin{aligned} \lim_{h \rightarrow 0} \frac{\frac{1}{a+h} - \frac{1}{a}}{h} &\Rightarrow \\ \frac{\lim_{h \rightarrow 0} \frac{1}{a+h} - \lim_{h \rightarrow 0} \frac{1}{a}}{\lim_{h \rightarrow 0} h} \end{aligned}$$

now what..

This is just the derivative of  $\frac{1}{a}$  where  $a$  is a real valued, non zero constant. So, it should just be 0. ## 100

$$\lim_{x \rightarrow 1} \frac{x^3 - 1}{x^2 - 1} \Rightarrow \lim_{x \rightarrow 1} \frac{(x - 1)(x^2 + 1 + 2x)}{(x + 1)(x - 1)}$$
