1 | Nucleic Acids

1.1 | Nucleic Acids

d-Oxy Ribone Nucleic Acid: DNA Ribone Nucleic Acid: RNA

All nucleic acids are comprised of monomer units that's synthesized together into polymers. => Just like [KBhBIO101Carbs](#) or [KBhBIO101AminoAcids](#)

1.2 | 3 basic parts of a Nucleic Acid

- phosphate group
- sugar (Ribos => sugar in RNA, di-oxy Ribos => sugar in HNA)
 - In di-oxy Ribos: a OH pair is replaced with a hydrogen **only in one position**. Hence "di-oxy"
- nitrogenous base
 - 4 bases in DNA
 - A, T, G, C
 - 2 bases
 -

DNA vs. RNA structure and synthesis
