

0.1 | **#flo #ret**

1 | **Notes**

- Nucleotides make up DNA and RNA
 - DNA and RNA have different levels of stability
 - This is all because of the hydroxyl group vs just the hydrogen
 - If the second carbon does not have an oxygen then it is DNA
 - You would write the letter d
 - If there is a T then put a T
 - Count the number of phosphates and use the code
 - 1 is Mono - M
 - 2 is Di - D
 - 3 Tri - T
 - Phosphate groups determine the amount of energy in the molecule
-
