Very simple structures, or “automations”, to life causes complicated effects and massive systems.
For instance, here’s a...

Flying Vee

1. Bird, if you see another bird $< 6\text{ft}$, follow it
2. Bird, if who you follow veers $> 30^\circ$, stop following it
3. Bird, if you follow a bird, follow on the side
4. Bird, make sure you are $> 10\text{ft}$ from any other bird you are following

And, you get a flying Vee shape (if you click that option)!

**The information to construct a flying Vee exists bottom-up, in EVERY UNIT of the Vee*

Units that comprise life
