

1 | Axler6.56 Minimizing the distance to a subspace

Suppose U is a finite-dimensional subspace of V , $v \in V$, and $u \in U$. Then,

$$\|v - P_U v\| \leq \|v - u\|$$

Because we often end up having to find the minimal $\|v - u\|$ where $u \in U$, this result makes linear algebra applicable to numerous real-world applications.

1.1 | Proof

$$\begin{aligned}\|v - P_U v\|^2 &\leq \|v - P_U v\|^2 + \|P_U v - u\|^2 \\ &= \|(v - P_U v) + (P_U v - u)\|^2 \\ &= \|v - u\|^2\end{aligned}$$
