As we reach the end of the semester, re-read your listening log from mid-semester conferences and review

(1) example(s) of your success or growth and

(2) specific goals in regard to math knowledge, skills and practices, and class participation.

- I think that I understood the concepts well, and never resorted to a formulaic approach.
- Without really ever being taught algebra, I'm glad to know that it is not really holding me back.
- One goal for next semester is to continue to try and understand math conceptually.
- While virtually always contributing in my breakout room (just like my other breakout room members), I did not always contribute to discussions in the main room. It's hard to do so in a Zoom environment; I want to figure out how to overcome this next semester.
