1 | Notes

- There are still scientists that are divided about the issue of climate change, but they are few and far between
 - The Majority of Americans think that scientists **are** divided about climate change
- Only a little more than half of Americans think that global temperatures have risen
 - This is concerning since it is not really a concept that is under heavy scientific debate
- Could we be wrong on climate change? We've been wrong in the past even when almost the entire scientific community has a general consensus

```
#include <iostream>
```

```
int main()
{
    std::cout << "Why does isos post readings so late :(" << std::endl;
}
```
