

1 | Entropy

#flo #disorganized

Statistical measure of randomness in a reaction of systems.

Entropy measured in microstates — the spread of energy in states. Greater numbers of microstates means that there is more entropy

To think about this, think about states of matter:

- Gas => Most Entropy
- Water => Meh Entropy
- Solids => Least Entropy

Figure 1: Screen Shot 2020-10-02 at 2.29.24 PM.png

In this image, states (a) and (e) are least likely. This is because **the greater the spread, the greater the entropy; systems like to have an increase of entropic state as much as it is possible.**

Definition 1 · **Second Law of Thermodynamics** In the universe, entropy is increasing due to chemical processes.
