1 | Notes

1.0.1 | Do most people believe in it?

- There are still scientists that are divided about the issue of climate change, but they are few and far between
 - The Majority of Americans think that scientists **are** divided about climate change
- Only a little more than half of Americans think that global temperatures have risen
 - This is concerning since it is not really a concept that is under heavy scientific debate

1.0.2 | Are we Sure it's Real?

- Could we be wrong on climate change? We've been wrong in the past even when almost the entire scientific community has a general consensus
-

1.1 | C plus plus that reflects my current feeling on this

```
#include <iostream>
```

```
int main()
{
    std::cout << "Why does isos post readings so late :(" << std::endl;
}
```
