So, let's begin with a very easy concept (sarcasm)

# 1 | What is life?

#### When is someone dead?

This is hard, so let's instead think about what a child?

Biological Female + Sperm + relative safety + Lot's of Peanut Butter => Child.

But! We know that:

- The person does not consciously go "let's create a liver", for instance
- Instead... She is following self organization rules
  - · Pieces self organize
  - · Put some chemistry into some matter, and it will organize to create a human being
- Theses self organization rules...
  - Does not need to be taught
  - Is inate to system
  - · Is on both the micro and macro level
    - Micro => Cells functioning
    - Macro => Flock of birds

# **Self Organization Rules**

Simple structures causes intricate, complicated behavior.

See [KB20200825165225], self-organization.

## **Types of Biology**

- Translational
- Academic
- Textbook
- Education

### **Textbook Biology**

- · Journaled and formalized
- · "Sum total of bio knowledge"

## **Academic Biology**

- · Scientific pursue of information
- · Synthesis and discovery of information

### **Translational Biology**

- · Research with outcome in mine
- · Trying to solve "a problem"

# **Educational Biology**

- Sharing and communicating biology
- Luke De :heart: Edu Biology
- Like...
  - · Convincing people to have vaccines
  - Convincing mask wearing

Think: how would I share this information
