#disorganized

1 | Cell Membrains

- · Variety of components
- · Suspended in "fluid mosaic"
- · Phosopholipids in fluid mosaic
 - Charged head
 - Nonpolar tail
 - "bi layer"
- · Also includes...
 - Colestrol
 - · Cells communicates
 - Proteans
 - · Makes sure the right molecules gets in/out
 - Nonpolar Oxygen + CO2 could easily get through
 - · Polar and charged molecules can't get through, unless...
 - · Channeled proteins let specific polar particles through
- Cell Transport => how chemicals get in + out of the cell
 - · Passive diffusion
 - Passive Passive diffusions => nonpolar things simply "fall in"
 - Facillitated diffusions => polar molecules selectively get through protean channels
 - Active transport
 - · ATP sheperds elements in
 - Bulk transport across the plasma membrane occurs by exocytosis and endocytosis.
