Intro:

- 1. Something that
  - 1. was surprising,
  - 2. was disappointing,
  - 3. and was exciting

ft. bron? #why.

oml we did three intros each.

## What we are learning:

"best way to learn is to teach"

ie. ask peers for help, not barak.

- Physics tried to describe things completely with math, unlike other sciences which use statistical models.
- Semester one:
  - · kinematics!
  - · Projectile motion
  - Dynamics!
  - · Energy (defines all of physics, but we don't really know what it is)
  - Momentum
  - Maybe: rotational motion
- Around 30 min per class

## **Grading:**

- · Aim for profs. Profs are an a. But ofc, go for exemplery!
- · Lots of quizzes

## The map of physics

- Classical
  - · Newtons Laws of motion and universal gravitation
    - · Also worked on optics,
      - · Waves and cosmology and astrophysics
  - · Electromagnetism
  - Classical and fluid dynamics
  - · Fluid dynamics
  - · Chaos Theory
  - · I'm not going to take notes in this
  - ^ in the 1900s

- Relativity
  - · Special relativity
    - · Light is at a constant speed to all viewers
  - · General relativity
- · Quantum Physics
  - · Nuclear physics
  - · Particle physics
  - · quantum field theory | ties in with special relativity
- The Chasm of ignorance
  - · we can't connect general relativity to quantum physics
  - · Also, dark matter and dark energy and such

Black = 101 Red = 201
