Source:

1 | **cube root**

1.1 | **approximation**

$$(1 + x)^{\frac{1}{3}} \to \frac{1}{3}(1 + x)^{\frac{-2}{3}}$$

at $x = 0$ is

$$\frac{1}{3}(1 + 0)^{\cdots} = \frac{1}{3}$$

so the linear approximation is

$$y = m(x - 0) + f(0) = \frac{1}{3}x + 1$$

1.2 | **estimations**

value	estimate
0.05	1.016666
-0.25	0.916666

These will be overestimates because the graph is concave down in this reigon.

2 | **sin(x)**

2.1 | **approximation**
