1 | **Reading**

1.1 | **Definition of a Definite Integral**

For each interval $[x_i, x_{i+1}]$, we choose x_i^* in the interval to be the position of the minimum (for lower bound) or maximum (upper bound) value.

2 | **Problems**

2.1 | **exr1.3**

Using the left edge: -8.4375

Summation notation for left edge approximation:

$$\sum_{i=0}^{n} \underbrace{\frac{b-a}{n}}_{\text{width}} \underbrace{f\left(a + \frac{b-a}{n}i\right)}_{\text{height}}$$

2.2 | **exr1.4 (in class)**

0.21875 using the left estimate

2.3 | **exr1.5**

2.3.1 | **left estimate**

69.4 meters (add all except last number, because we are stopping at 3.0 seconds in.)

2.3.2 | **right estimate**
