1 | **Page o' notes**

1.0.1 |**Machine learning broad level implications on privacy**

- ML requires big data

  - machine learning has driven us into the "information age"
    - cause of most of these issues
  - getting lots of info $\rightarrow$ invading privacy, generally

- ML can break privacy without explicit data

  - ML can de-anonymize anonymous activities
    - ML based tracking systems make anonymity hard
    - hashing ISN'T good enough
  - same thing can be done even without ml
    - location tracking easily de-anonymized by simple cross reference
    -

- ML can construct human models

  - ML model of how you think and act
    - viewed as creepy
  - if it could predict your thoughts, what then?

1.0.2 |**Regulation!**

- FTC (federal trade commission) coming down hard

  - hitting Facebook, google, ect.

- CCPA, California consumer privacy act
- GDPR, General Data Protection Regulation
-

1.0.3 |**Rights**

- right to be forgotten

  - opt out law by the consumer
  - is this a right?

- right to our data, as outlined in CCPA

  - again, really a right?

1.0.4 | **Flipside**

- if privacy-preserving techniques ultimately fail,
    - then what?
- ML does a lot of good
    - though the individual might not want to share medical data,
    - that same data on the large scale could save countless lives
- forced to give data by tragedy of the commons
    - you want ml networks to portray your demographic acurat
