Source: README

I guess now that @Exr0n started a trend I will also create a naming convention that should be almost compatible with R0n's.

1 | General Naming

General note file names will be named roughly ⸤KBhCOURSE##UpperCamelCaseName⸥Tag

Item	Note
Course##	This is the course number. It should be all caps, with 3-4 letter course + level. Like MATH401
Tag	Optional information about the note

Tags

Tag	Meaning
index	Master Index
read	Reading Note
ln	Large Note (the old 00-index)

Yeah. That's it.
